Course: OE Fundamentals of Business Mathematics

Semester: II Credits: 2 Subject Code: OE1-22309 Lectures: 30

Course Outcomes:

At the end of this course, the learner will be able to:

- CO1-Demonstrate, determine and validate a given argument, and be able to construct mathematical proofs independently
- CO2- Recall and identify, prepare, analyze and execute mathematical tools in their careers.
- CO3-Remember, examine, analyze, formulate and solve linear systems/linear inequalities graphically/geometrically and algebraically (using matrices),
- CO4-Comprehend and explain the value of mathematical implementation in daily life and associating mathematical ideas to model/evaluate real-world problems.

Unit 1:Matrices & Determinants	15
Introduction, Operations on Matrices	
Properties of Matrices	
Multiplication, Transpose, Inverse of a Matrix,	
Introduction to Determinants, Value, Minors and Cofactors	
Properties of Determinants	
Solution of a system of Linear Equations	
Numerical Problems	
Assignment: Internal Assessment	

Unit 2:LPP, Transportation Problem & Assignment Problem	15
• Introduction, Formulation of an LPP, General Linear programming Problem Areas of Applications of LPP	
 Introduction, The Transportation type problems in Standard Linear Programming Form 	
• A Set of Basic Feasible Solutions, Initial Basic Feasible Solution (a) North – West Corner Method (b)Matrix – Minima Method (c) Vogel's Approximation Method	
 Variations in Transportation Problem Assignment Problems, Mathematical Formulation of the Problem 	
 Solution of the Assignment Problem, Computational Procedure, Variations in Assignment Problems 	
Numerical Problems
