

Course: SEC
Mathematics Practical using 'C' Language

Semester: I	Credits: 2	Subject Code: BSSECCSM12301	Lectures: 60
-------------	------------	-----------------------------	--------------

Course Outcomes:

At the end of this course, the learner will be able to:

- CO1-Construct a solid foundation in the field of programming handling various mathematical problems from vector geometry using 'C' Programming.
- CO2-Critically analyze a given problem, understand and solve the problem using C.
- CO3-Find and explain the concepts of GCD, LCM and remainder using Fermat's theorem and apply those in C programming.
- CO4-Understand the use of various concepts such as arrays in C Programming for mathematical problems.

Unit 1: C- Program	30
<ul style="list-style-type: none">• Sorting of points w.r.t an oblique line in the plane.• Intersection of two-line segments.• Sorting of points w.r.t a convex polygon.• Intersection of a line segment with a convex polygon.• Sorting of points w.r.t rectangle whose sides are parallel to coordinate axes.• Sorting of points w.r.t. parallelepiped whose sides are parallel to the co-ordinate axes.co-ordinate axes.	

Unit 2: C- Programs	30
<ul style="list-style-type: none">• Area of convex polygon.• To find the pair of points which are nearest apart.• To find the pair of points which are farthest apart.• To find the nearest neighborhood of every point in the given set of points.• Find remainder problem based on Fermat's Theorem.• Find GCD and LCM of two numbers using Euclidean Algorithm.
